Among the bunch of new features, you will find a more comfortable Backup and its Restore counterpart. In addition, as a surprise, I will introduce the "crazy" profile. Fasten seat belts...</p> <p>Here you are... as promised. See the first post for details.</p> <p>Happy New Year!</p>

Now, Skype is available as an auto-loadable sfs. Runs either by root (with sound) or by spot (in silent mode) Re-tested, uploaded again to www.smokey01.com/gjuhasz with the same 'bark5' name.</p> <p>Regards, gjuhasz</p>

Please note that Puli can defend most of them due to its nature. Please ensure that the boot device (pendrive) is removed from the USB slot as soon as Puli recommends that. Also, consider using the Roforous or Crazy profiles while booting Puli on an unknown machine or visit suspicious websites.</p> <p>I will patch Puli as soon as the official fix(es) arrive.</p> <p>Have fun!</p> <p>Regards, gjuhasz</p> <p>Last edited by gjuhasz on Tue 04 Nov 2014, 05:14; edited 2 times in total</p>

The auto-update feature will be tested by itself 😊. Soon.</p> <p>Have fun!</p> <p>gjuhasz</p> <p>Last edited by gjuhasz on Thu 06 Nov 2014, 14:50; edited 4 times in total</p>
